

INNOVATIVE PELLET FUEL FOR BEE HIVE SMOKER

BeeSmoke

More THAN smoke - easier beekeeping!

Calmer
bees and
less
varroa!

FOR BOTH
HOBBYISTS AND
PROFESSIONALS!

- for regular use on the bee hive
- significantly calms bees down in relation to the “ordinary” smoke
- particularly suitable when the bees are extremely agitated (honey crisis, moving, wind...)
- does not harm the bees, and a part of varroa is stunned and releases from the bees, does not die; it is recommended to use a net or coarse fabric on the slatted rack to prevent varroa from reattaching to the bees
- reduces robbing
- facilitates the merging of bee colonies and a safer installation of a bee queen
- no limitation in use and “smoke dosage”
- 500 g packaging provides more than 20 hours of efficient smoke
- does not contain petroleum or similar substance
