

INNOVATIVE PELLET FUEL FOR BEE HIVE SMOKER

BeeSmoke *forte*

More THAN smoke - more successful beekeeping!

Smoking
the bees
and the
varroa!

FOR BOTH
HOBBYISTS AND
PROFESSIONALS!

- smoking the bees and the varroa
- does not harm the bees, stuns some the varroa is stunned which releases from the bees, but does not die; it is recommended to use the net, coarse fabric or oiled carton on the slatted rack to prevent the varroa from reattaching to the bees
- significantly calms the bees down, facilitates and speeds up many biotechnological operations
- prevents robbing between two or more bee colonies
- facilitates formation of new colonies from the bees from different colonies and keeping them on the same site
- enables moving a bee colony on the same site without "losing" the bees
- facilitates the merging of bee colonies and a safer installation of a bee queen
- no limitation regarding the dynamics of use and "smoke dosage"
- 200 g packaging provides about 6 hours of smoke or up to 2 hours of intense smoking of the bees and the varroa through bee hive entrance
- does not contain petroleum or similar substance
